## Software and Systems / Technical Support Engineer- Worldwide travel involved

### Description

This already well-established business is one of the world's leading designers and manufacturers of a range of articulated lifting truck equipment. They supply to some of the industries that have also prospered in lockdown; they had a great 2020 and are looking good for 2021. They are looking to add a graduate to their team.

You will develop and support the production department and customers with software and electric / electronic aspects of the product. This will include training them on certain aspects, and will involve travel to various locations in the UK and Worldwide.

You will develop software functionality to address the needs of customers and provide product technical support.

You should possess knowledge of:

- Electrical circuits/components;
- Control systems;
- Power electronics/traction systems;
- Controller software.

As you will be helping others your knowledge should be strong, and experience should relate to control of largish motors that are controlled electrically / electronically..

You will be communicating at all levels, both verbally and in writing, and will be undertaking complex work in a planned and systematic manner.

Your degree should be electronic engineering, control systems or software application related- and some knowledge of applied hydraulics, and mechanical systems (gears, bearings etc...) would also be ideal.
